- The aim of the qualification is to provide a modular route to a recognised level of attainment for practising veterinary surgeons, so that they may perform as competent independent practitioners, delivering a consistently high standard of practice to their clients.
- The framework also aims to provide a structure for continuing professional development and lifelong learning.

24. Overall Programme Level Learning Outcomes - the programme offers opportunities for students to achieve and demonstrate the following learning outcomes. Learning outcomes should be specified for all intermediate awards as well as for the terminal award.

On successful completion of the Certificate of Advanced Veterinary Practice, students will need to demonstrate:

- a thorough understanding of the knowledge base and a critical awareness of developments at the forefront of their area of professional practice;
- a comprehensive understanding of techniques applicable to their own area of practice;
- originality in the application of knowledge, together with a practical understanding of how established techniques of research and clinical enquiry are used to create and interpret knowledge in their professional area;
- conceptual understanding that enables them to
 - evaluate critically current literature and research in their professional area and
 - evaluate clinical methodologies and techniques, and develop critiques of them and, where appropriate to propose new approaches to professional practice.

All modules support these learning outcomes.

- deal with complex issues in an organised and creative manner, make sound judgements in the absence of complete data, and communicate their conclusions clearly to veterinary colleagues and to non-veterinary audiences, including clients;
- demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks in their professional area of work;
- continue to advance their knowledge and understanding, and to develop new skills to a high level;
